

WEXO

WEXO by PAVIGYM is the perfect solution for adapting old unused spaces and transforming them into sought after workout centers. As racquetball courts continue to go largely unused in recreation facilities, WEXO offers a high end yet affordable conversion kit to turn that empty unused space into a valuable resource.

Designed to offer intense individual and small group workouts, the WEXO conversion kit brings together turf and high end PAVIGYM vulcanized rubber tiles for unmatched cardio and weight training zones that will challenge any level of user. Cross Training circuits can offer any combination of sled, kettlebell, dumbbell, barbell, rope and cardio exercises. With the proper surface, imagination is the only limitation to planning impactful workouts.

- A 20x40 WEXO kit contains:
- 2 - Turf sled/sprint lanes
 - 4 - Turf activity zones
 - 1 - Large weightlifting area with dropzones

See opposite side for details

Convert Any 20x40 Racquetball Court Into a Multi-Purpose Cross Training Area.

3 PAVIGYM Components that make the **WEXO Cross Training Experience**

PAVIGYM Turf

We don't just imitate grass. We improve it.

High density stitch counts ensures an unrivalled grip and excellent comfort when performing high resistance floor exercises. Designed and manufactured using the latest technology to obtain the best level of resistance for exercises involving dragging, intense friction, and heavy weights. Its polyethylene fibres provide the best thermal and chemical resistance as well as impact resistance, while the polyurethane finish gives high resistance to abrasion, wear and tear, oxidation, and ozone cracking, while offering and conserving elasticity at very low temperatures.

PAVIGYM Weightlifting Vulcanized Rubber Tiles

The combination of WEIGHTLIFTING and our S&S flooring for weightlifting eliminates the need for weightlifting platforms. Enjoy a free, open, multi-use space, safe in the knowledge that your flooring will take the heaviest of weights once the free lifting starts, but without the need to drag out platforms. PAVIGYM's new WEIGHTLIFTING flooring solution is an improvement on wooden floors in weightlifting areas. Its ability to provide the perfect platform for cross training, functional training, and weight training, makes our WEIGHTLIFTING flooring the best surface for weight training in any gym.

PAVIGYM Extreme S&S vulcanized Rubber Tiles

EXTREME S&S is specifically designed for heavy duty weight areas where the maximum level of resistance and sound and impact absorption is needed. Offering better comfort, thermal and sound insulation, and resistance to damage and marks than the standard version, EXTREME S&S truly is the ultimate technical weight room flooring. EXTREME S&S is perfect for drop zones and the heavy lifting areas that make WEXO a full Cross Training surface solution.
