

THE ORIGINAL STALL MAT

Made in
America's
Heartland for over 50
years, **The Original Stall**

Mat is built to last in the harshest environments. Manufactured of re-vulcanized recycled rubber, **The Original Stall Mat** is safer and more durable than urethane-bound stall mats. It offers a traction-enhancing pebble top surface with grooved evacuation channels along the bottom to improve airflow and minimize the containment of moisture.

The re-vulcanized process uses high heat, a pressure mold, and rebonding chemicals to create a non-permeable surface that can be easily cleaned, maintained, and disinfected. Re-vulcanized rubber has a tensile strength 4-times stronger than urethane-bound mats. This process results in a mat that can protect both your facility and users in the most dynamic conditions.

Each mat is 3/4" thick and trimmed to four trued edges that measure 71" x 47" and allows for easy, no gap, wall-to-wall installation. Each mat weighs about 94lbs and has a color pattern that helps hide dust and footprints. These mats are made exclusively from recycled rubber, allowing the creation of a 100% zero waste material process.
